

M. USMAN MUSTAFA

FULL STACK DEVELOPER

Lahore, Pakistan | +92-307-8345027 | usmanmustafaofficial@gmail.com | linkedin.com/in/muhammad-usman-03b3a4390

PROFESSIONAL SUMMARY

Full-Stack Developer with hands-on experience in building responsive and scalable web applications using Laravel, PHP, React, JavaScript, and MySQL. Currently working at Bitlogicx as a Full-Stack Developer. Strong interest in backend systems, API development, AI-powered applications, and modern software architecture. Experienced in collaborative development, problem-solving, and delivering practical technology solutions.

EDUCATION

Bachelor of Science in Computer Science (BSCS) | University of Central Punjab
Oct 2023 – Jun 2027 | 7th Semester.

TECHNICAL SKILLS

Backend	PHP, Laravel, FastAPI, REST APIs
Frontend	React.js, JavaScript, HTML5, CSS3, Bootstrap, Tailwind CSS
Databases	MySQL, PostgreSQL, Redis, ChromaDB
AI & Automation	Python, LLMs, RAG, LangChain, Ansible
Tools & Deployment	Docker, WebSockets, Git, Figma
Programming	PHP, JavaScript, Python, C++, C

PROFESSIONAL EXPERIENCE

Full-Stack Developer | Bitlogicx

Currently contributing to full-stack web application development, working across frontend and backend technologies to build and maintain responsive, database-driven solutions.

Crashopsy| Featured Project / FINAL YEAR PROJECT | AI-Powered Incident Root Cause Analysis & Fix Generation System

- Developing an AI-powered platform that analyzes software and infrastructure logs to identify likely incident root causes.
- Building a RAG pipeline to retrieve relevant historical incidents and runbooks for context-aware diagnosis.
- Integrating locally hosted LLM capabilities to generate evidence-based RCA reports with supporting logs and confidence indicators.
- Designing an AI-assisted remediation engine that suggests Ansible fix scripts for engineer review and approval.
- Implementing a real-time collaborative War Room for incident monitoring and investigation.

Tech Stack: React.js, FastAPI, Python, LLM, RAG, LangChain, ChromaDB, PostgreSQL, Redis, WebSockets, Docker, Ansible.

PROJECTS

Employee Management System | Full-Stack Web Application

- Architected a role-based Employee Management System supporting **Admin, Manager, Team Lead, and Employee** roles with granular permissions enforced across both backend APIs and frontend interfaces.
- Developed a **real-time Kanban task management system** using Laravel Echo and Pusher, enabling instant task status updates across connected users without manual page refresh.
- Optimized dashboard performance by implementing a consolidated API bootstrap endpoint, reducing multiple sequential API requests into a more efficient single-request workflow.
- Built a complete **leave management system** with role-specific approval workflows, automated leave balance updates, and email notifications.
- Developed a **real-time one-to-one chat system** with file attachment support and a WebSocket-powered notification center.
- Created an **Admin Analytics Dashboard** using Recharts to visualize login activity, task status distribution, project progress, and employee-related insights.
- Implemented secure authentication using **Laravel Sanctum** and role/permission management using **Spatie Laravel Permission**.
- Resolved complex React state synchronization and API optimization issues, reducing redundant requests and improving real-time data consistency.

Tech Stack: *Laravel, PHP, MySQL, React.js, Vite, Laravel Sanctum, Spatie Permission, Pusher, Laravel Echo, Recharts*

DotHRM | Multi-Tenant HR & SaaS Management Platform

- Developed a comprehensive multi-tenant SaaS management platform with a centralized Super Admin dashboard for managing companies, users, subscription plans, coupons, revenue, and system-level operations.
- Architected company and subscription management workflows, including plan assignment, active subscriptions, pending requests, and coupon management.
- Built an analytics dashboard featuring revenue tracking, company registration trends, recently registered companies, and top-performing subscription plans.
- Implemented role-based access control and system administration features, including roles, permissions, settings, reports, and centralized platform controls.
- Developed responsive dashboards and management interfaces focused on business insights, SaaS operations, and efficient platform oversight.
- Designed scalable REST APIs to support company management, subscription workflows, dashboard analytics, and administrative operations.

Tech Stack: *Laravel, PHP, MySQL, React.js, JavaScript, REST APIs*

LENS | *Beauty Product Discovery & Ingredient Analysis Platform | Full-Stack Web Application*

- Developed a modern beauty and cosmetics discovery platform that helps users explore products based on **categories, ingredients, safety signals, and product information**.
- Built an interactive homepage featuring **product categories, featured products, safety-based recommendations, and educational beauty content**.
- Implemented a product discovery system that allows users to explore cosmetics through different categories and make more informed purchasing decisions.
- Designed product sections focused on **clear safety signals**, helping users understand and compare product information more easily.
- Created educational content sections explaining **how to understand beauty products and make smarter skincare choices**.
- Developed an ingredient-focused experience that promotes **transparency and informed decision-making** for cosmetic product users.
- Built responsive UI components including product cards, category sections, FAQ modules, blog sections, and recommendation panels.
- Designed a clean, modern, and user-friendly interface optimized for product exploration and engagement.

Tech Stack: *Laravel, PHP, React.js, MySQL, REST APIs, JavaScript, HTML5, CSS3.*

Key Features: *Product Discovery, Category Browsing, Ingredient Awareness, Safety Signals, Product Recommendations, Educational Content, FAQ, Blog System, Responsive Design.*
